EDUCATION

Politeknik Negri Bandung (Polban) Bandung, Indonesia
Associate Degree Telecommunications Engineer; Aug 2022 – Aug 2026
Major in IoT and Smart Systems
Accreditation: A.
Relevant Cousework: Backend & Frontend Development, Internet Of Things, Database Systems, Interfacing Design, Software Testing.

WORK EXPERIENCE

PT Neural Technologies Indonesia South Jakarta, Indonesia
Frontend Engineer Jun 2024 – Sep 2024

- Participated in working on 9 projects until entering the client server, starting from development, troubleshooting, and maintenance.
- Contributed to the development of dashboards for network monitoring across Indonesia, enabling real-time data visualization and insightful analytics.
- Transformed design concepts into fully responsive web interfaces, prioritizing a mobile-first approach to deliver seamless and user-friendly experiences.

PROJECT

Development of a Smart Toy Car Controlled via Telegram Using IoT Aug 2023 – Sep 2023

- Designed and built a remotely controlled toy car, utilizing IoT technology to enable seamless operation through Telegram commands such as forward, reverse, turn, and stop.
- Integrated microcontroller and motor control systems with Telegram's API, ensuring real-time responsiveness and precise movement based on user inputs.
- Developed a user-friendly control mechanism, allowing users to interact with the car effortlessly through a chat interface, combining innovation and convenience.

Development of a Desktop Application with CRUD Functionality Jan 2024 – Jan 2024

- Built a desktop application using Java, featuring a user-friendly interface for managing data within a table structure.
- Implemented full CRUD (Create, Read, Update, Delete) functionality, enabling users to easily interact with the table and manage records in a seamless manner.
- Optimized database interactions and user experience, ensuring efficient data handling and smooth operations across different features of the application.

Building a face detection application for authentication Sep 2025 – Nov 2025

- Developed a face detection application that integrates advanced recognition technology to ensure secure and efficient authentication processes.
- Designed and implemented user-friendly interfaces, allowing seamless input of personal data, including name, nickname, and photo, while maintaining high accuracy in detection and data capture.
- Integrated backend communication for real-time processing, enabling secure storage and validation of user data, including GPS-based location tracking.

Development of an E-commerce Website Jan 2026 – Dec 2025

- Created a dynamic e-commerce website for purchasing ice cream products, integrating a backend API to manage product listings, orders, and transactions.
- Implemented a secure authentication system, including user registration, login, and role-based access control to ensure data protection and user-specific functionality.

- Designed an intuitive interface and shopping flow, enabling users to browse products, add items to the cart, and complete purchases with ease.
- Designed and developed a scalable backend for an e-commerce platform using NestJS, Prisma, and Kafka, ensuring efficient handling of user data, orders, and transactions.
- Implemented authentication and authorization mechanisms with JWT-based access and refresh tokens, alongside role-based access control (RBAC) for secure user management.
- Integrated Midtrans as a payment gateway, enabling seamless transaction processing and real-time payment status updates.
- Optimized API performance and database interactions, enhancing the system's responsiveness and reliability under high traffic conditions.

Development of an EEG-Based Cognitive Condition Classification Jan 2026 – June 2026

Algorithm Using a Machine Learning Approach

- Developed a machine learning classification system to differentiate Normal, Mild Cognitive Impairment (MCI), and Alzheimer's disease categories using resting-state Electroencephalography (EEG) signals.
- Implemented complex signal preprocessing (ICA, filtering) and multidomain feature extraction (temporal, spectral shape, wavelet energy, Hjorth parameters, and entropies).
- Trained and optimized an XGBoost Classifier algorithm, achieving an overall classification accuracy of 92.31% and a weighted F1-score of 0.9212.
- Built a full-stack web application to process computationally intensive EEG signals, utilizing React and Vite for a high-performance frontend interface.
- Designed an asynchronous backend using FastAPI to handle business logic and machine learning model integration.
- Integrated PostgreSQL for structured metadata storage and MinIO object storage for efficient handling of large raw EEG files.

ORGANIZATION EXPERIENCE

Telecommunication Engineering Student Association Jan 2024 – Jan 2025

Expert staff

- Vice Chairperson of the Industrial Visit Committee, responsible for coordinating event planning, managing team operations, and ensuring the visit's overall success.
- Head of Logistics Division for Community Service, overseeing the preparation and distribution of essential materials to support community engagement activities effectively.
- Head of Logistics Division for Elementary School Service Programs, ensuring smooth logistical operations, including organizing supplies and maintaining a supportive environment for students.

TRAINING AND CERTIFICATIONS

- Bootcamp Basic Programmer — Build With Angga – 2023
- Cisco Certified Network Associate — Cisco – 2024
- Junior Frontend Developer — Dicoding Academy – 2024

SKILLS

- Documentation : Microsoft Office, Docs, Sheet.
- Programing Language : Javascript, Typescript, Java, Kotlin, C, Python, Rust, Golang, Dart.
- Frontend Technical : React.js, Next.js, Nuxt.js, Vue.js, Angular, Svelte, React Native, Flutter, Redux, Pinia, Zustand, Tailwind CSS, Material UI, Ant Design, Framer Motion, Shadcn.
- Backend & database technical : Node.js, NestJS, Prisma, Zod, Jest, Springboot, Hibernate, Bean, Mockito, Maven, FastAPI, SQLAlchemy, Pyandatic, Pytest, Axum, SQLx, validator, Cargo, Fiber, GORM, MySQL, PostgreSQL, Redis, MinIO, RabbitMQ, Elasticsearch,
- Frontend : UI Slicing, Responsive Design, State Management, Routing, Server-Side Rendering (SSR), Client-Side Rendering (CSR), API Integration, Data Visualization, Form Handling & Validation, Animations & Transitions, Performance Optimization, Error Handling & Debugging, Accessibility (a11y),

Component Architecture, Design Systems, Testing & Test Automation, Progressive Web Apps (PWA)

- Backend : RESTful API Development, Database Design & Management, Database Optimization, ORM, Authentication & Authorization, Role-Based Access Control (RBAC), Middleware Implementation, Background Job Processing, Caching Strategies, WebSocket & Real-time Data, Message Queue, Error Handling & Logging, Performance Optimization, Unit & Integration Testing, API Documentation, Security Best Practices, Containerization, CI/CD, Cloud Deployment, Microservices Architecture, Event-Driven Architecture, Rate Limiting, API Versioning, Database Transactions, Observability & Monitoring

LANGUAGES

- Indonesia : Native or bilingual profiency
- English : Working and daily proficiency
